△ Species name no longer applies in Australia although it is used here because the distribution for Victorian species of this group is uncertain.  
Speak to your local indigenous nursery regarding the availability of plants listed above.

Height for grasses, sedges and rushes is to the top of the flowering stem.

This map is based on EVC maps of the modelled distribution of pre-1750 vegetation boundaries (NRE 2002). Less than 40% of native vegetation cover is remaining today within the Teuron region.

It is intended as a guide for determining the EVC in which you will be planting. For more detailed information regarding the boundaries of EVCs in this area, contact Mornington Peninsula Shire Customer Service.

**Biodiversity Protection**  
Grants or rebates are available from Council for owners of land over two hectares. Conditions apply. Contact the Customer Service Centre.
